How to Clean Your SPECIAL FINISH Showerhead

In order to keep your Speakman showerhead looking and performing the best it can, you may find that a periodic cleaning is necessary depending on the type of water your home has.

Cleaning your showerhead is easy and you will not need to use any harsh and/or abrasive cleaners.

You'll need:

- Mild Soap
- Warm Water
- Measuring cup or small bucket
- A strong 1-Quart Plastic Food Bag
- Tape – Electrical tape, Adhesive tape, duct tape, masking tape, or cellophane tape.
- An old used disposable toothbrush

First start by making sure the shower valve is turned off and there is no leaking from the showerhead.

- Fill your measuring cup or small bucket with the warm water and add some mild soap, stir.
- Pour the mixture into your 1-Quart Plastic Food Bag.
- Place the bag over the showerhead so that the showerhead face and as much as possible of the body of the showerhead is immersed in the solution.
- Wrap tape around the bag, squeezing it around the inlet pipe for the showerhead, using enough wraps of tape to hold the bag securely in place and the showerhead immersed in the solution. BE SURE the tape holds the bag securely fastened in position. If in doubt. Use more tape.
- As an alternative to using the plastic bag, you may unscrew the showerhead from its arm and place the showerhead face down in the solution in the measuring cup or small bucket. See "How to Change a Showerhead" video for help removing your showerhead.
- Let the showerhead stay immersed in the solution overnight, or at least for a few hours.
- In the morning, remove the bag from the showerhead.
- Before turning on the water, take the toothbrush and brush any remaining mineral deposits from the showerhead.
- Turn on the water and wait for about 1 minute before entering the shower to allow any solution remaining in the showerhead to be expelled.
